

# Executive Summary

## Global Management and Billing Software for the Wireless Trunking Industry

Do you REALLY Know What Radios Are REALLY Using Your System? Do you have hackers on your system?

You can't get the usage nor the data resolution reports you need. The Agencies on your system are demanding reports that you can't produce. The software you have takes days to create a report.

You want your Agencies or departments to know the value of what they are using on your system but not actually 'invoice' for it.

You actually invoice for your system usage (flat rate and/or airtime), but your billing never seems to be accurate.

**GenWATCH3™** is a Control Channel decoder for SmartNet and SmartZone systems. It can store up to 1 year (or more) of data for detailed reporting. Monitor the health of your channels. Contains Licensed Motorola Technology. For a fully functioning, 60-day demo of GenWATCH3™, click [here](#)

**GenSZAI SUITE** (pronounced Gen'-sigh) accumulates all airtime for the Motorola SmartZone, Astro, Omnilink and Dimetra trunk system owner. Uses ATIA based data. For public safety, private systems, CII and SMR owner with ATIA installed.

**NetVista** is a complimentary product to GenSZAI. NetVista allows the GenSZAI owner to remotely view live activity on his Motorola SmartZone, Astro, Omnilink and Dimetra trunk system from any location on the owner's LAN. Any Ethernet connection can be used that can 'see' the GenSZAI accumulator; Live channel activity, Call Packet information, and more. Many 'canned reports' are also available from within NetVista. Uses ATIA based data.

**CloneWatch** will work along with our industry accepted GenWatch3 and GenSZAI to monitor your Motorola SmartNet or SmartZone system and alert you when things just aren't right.

**GenSPOut** (Genesis Specified Packet Output) has the ability to take the complicated Motorola 3600 baud Control Channel, or the more complicated ATIA data stream (from a SmartZone system), and streamline it, filter it, organize it, and send it to any device of your choosing.

**Genesis Trio** is a 100% Windows 2000 based customer billing, reporting and id management. Trio covers from order entry to provisioning to billing. Trio can handle all airtime billing for each of the systems that it supports. Trio operates and invoices in multiple languages. For SmartZone, Dimetra, SmartNet, Omnilink, LTR, PassPort NTS.

**GW3-TRBO®** represents the ultimate in system management for MOTOTRBO™. With GW3-TRBO®, you have an easy way to keep very close tabs on exactly how your system is performing.

For more detail or technical specifications on these and other products please contact us at [info@telcotrek.com](mailto:info@telcotrek.com), or by phone in the United States at 772 905 3123, and in Latin America in Venezuela at 58 212 265 5673.

TelcoTrek, Inc. is the full line distributor in Latin America and the Caribbean for The Genesis Group.
