

CUSTOM NM CLIENT TERMINALS

BY CLIENT COMMUNICATION SOLUTIONS

Are you a current Motorola 2.03, 3.0, or 3.5 radio system owner?

Do you have failed or aging NCD Terminals or PC Management Clients that need updating or replacing?

Maybe you want the ability to travel with your management client to remote sites or remote locations on your network; and manage your system from multiple locations without the need to travel to a fixed location.

Then look no further than Client Communication Solutions.

- Portability
- Ease of Use
- Drop in Replacement
- Network Printing
- Windows XP Environment
- Print Screen Function
- 24-hour Technical Support
- Professional Onsite Installation
- Motorola Supported Replacement

CCS was founded on the need to extend the life of management clients in Motorola Smartzone systems. This is due to the fact that Motorola no longer produces a replacement for NCD Terminals or PC Clients running management functions in 3.0 and 3.5 Smartzone systems. CCS clients have been tested and deployed throughout the United States with local, county, and state agencies; as well as the Department of Defense. At this time, CCS is the only source for tested and Motorola reviewed client replacements for 3.0 and 3.5 systems; along with direct in house support available 24 / 7.

The CCS client is a complete drop in replacement for the current variants of Motorola NCD Terminals and PC Management Clients running PC-Xware 5 or Hummingbird Exceed. Replacing your current, aging, or already failing management client allows you to leverage and extend the life of your current radio system management tool; as well as using faster and more up to date computer technology to manage your radio system database. CCS replacement clients run the standard operating system of Windows XP; with support for Windows Vista and Windows 7 operating systems currently in development.

Installation of the CCS client is seamless and simple. The CCS client provides you the same screens you have always used with your legacy clients, but with increased functionality with features like print screen, network based printing, file storage and movement thru USB ports, and increased speed and access to your database. CCS clients can be preconfigured with your network information and provided in a plug and play configuration; or we also can provide you with expert on site installation services.

We also offer a variant of the NCD Terminal / PC Client in a portable form. Just image having your management client on a laptop computer; you get a call out at 2am with a problem at a remote site on your system, but you want to be able to look at Zone Watch or change some management settings while you are out at the remote site performing maintenance. Just turn on your portable management client from CCS, plug into the remote LAN at your location and it's just like sitting at your systems fixed management client. No more driving to one place and then another to perform two tasks.
